GLIMPSE-17775 · OBSERVED G395M · CONDITIONAL PROFILE COMPARISON
Published candidate, not a new discovery. Empirical shapes are not competing complete physical models.
Hα: finite flux/error only despite zero NPIX; unresolved metadata conflict. Paδ: strict mask.
Shown: resolving power ×1.7; shared narrow-line nuisance components; no absorption component.
PROVISIONAL · Halpha · ΔBIC(G−E) = 1445.8
Paschen delta · ΔBIC(G−E) = -2.7
